**Report description:**

A virtual card is an electronic card which can be created using the bank's net banking facility, by providing one's credit or debit card details. No charges have to be paid for the same. As the name suggests, they need not be physically issued by card providers. Each virtual card comes with its own card number, CVV number and validity details. It can be used for online transactions just like regular credit/debit cards. Users can just use their smartphone to make a transaction using their virtual cards.

Virtual cards offers added security benefits to their customers as compared to physical cards, since everything is done online so it only involves a few taps for the user to add money, do transactions, paying suppliers/buyers, all within a few seconds. In addition, the virtual cards contains a 16 digit number which is specifically designed for single-use only in between the payer and the payee. Moreover, virtual cards cost lesser than physical cards and they also allow customers to set their own spending limits. Therefore, these are some of the factors propelling the virtual cards market growth. However, a large section of customers are not satisfied with virtual cards and still want a physical card for making transaction. Moreover, there are major concerns over frauds if the smartphone is stolen. Therefore, these are some of the major factors limiting the growth of virtual cards market. On the contrary, rapid innovation in the payments technology and growing concerns over no touch payments is expected to provide lucrative growth opportunities for the virtual cards market in the coming years.

The virtual cards market is segmented on the basis of product type, industry verticals, end user, and region. By product type, it is segmented into B2B Virtual Card, B2C Remote Payment Virtual Cards, and B2C POS Virtual Cards. The B2B virtual card segment is
