### **Report description:**

#### **KEY FINDINGS**

The Thailand surgical robotics market is predicted to grow at a CAGR of 9.91% during the forecast period, 2024-2032. The market growth is attributed to increasing demand for minimally invasive surgeries, rising prevalence of chronic diseases, and growing healthcare infrastructure investments. Surgeons and healthcare facilities are increasingly adopting robotic-assisted surgical systems to improve procedural accuracy, reduce complications, and enhance patient recovery time.

#### **MARKET INSIGHTS**

Several notable trends are shaping the landscape of the surgical robotics market in Thailand. Firstly, there is a growing emphasis on developing robotic platforms specifically designed to address the needs of emerging markets, including Thailand. These platforms often prioritize affordability, ease of use, and compatibility with existing healthcare infrastructure.

Furthermore, collaborations between technology companies, healthcare providers, and regulatory bodies are fostering innovation and facilitating the adoption of surgical robotics in Thailand. These collaborations focus on areas such as training and education, regulatory compliance, and the development of localized solutions.

In 2022, about 19.46% of Thailand's population consisted of individuals aged 60 years and older. This demographic surge is driving the demand for surgical robotics in the country. With more elderly people, there is a higher prevalence of age-related health issues, especially those requiring surgeries like joint replacements and orthopedic interventions. Consequently, this shift toward an older population is increasing the need and preference for advanced technologies like surgical robotics to address the unique healthcare needs and complexities of aging individuals.
