Report description:

KEY FINDINGS

The Singapore autonomous mobile manipulator robots (AMMR) market is estimated to record a CAGR of 22.88% during the forecast period, 2024-2032. The market growth is accredited to a significant surge driven by technological advancements and increasing industrial automation demands.

MARKET INSIGHTS

Manufacturing industries in Singapore are embracing AMMRs to enhance operational efficiency, streamline production processes, and reduce labor costs. These robots can perform intricate tasks with precision and consistency, leading to improved productivity and quality control.

Logistics companies are adopting AMMRs to optimize warehouse operations, including goods movement, picking, and packing. With their ability to navigate autonomously in dynamic environments, AMMRs contribute to faster order fulfillment and inventory management.

The surge in consumer disposable income, shifts in lifestyle, and evolving purchasing habits are driving the uptick in online platform transactions for goods and products. Consequently, the e-commerce sector is witnessing growth, fueling the demand for Automated Material Movement and Retrieval (AMMR) solutions in logistics and warehouses. Furthermore, AMMR technologies are advancing rapidly, meeting consumer desires for personalized experiences and uniqueness alongside process innovation.

The instances of robotics automation in the Singapore market encompass the presence of O-R3, the safe distancing ambassador stationed at Bedok and Pandan Reservoir, as well as the Sunburst UV bot deployed at Northpoint City for disinfecting against the coronavirus. These robotic solutions exemplify the utilization of Autonomous Mobile Robotics (AMMRs) to streamline operations and enhance overall efficiency.
