Report description:**KEY FINDINGS**

The Europe renewable methanol market is projected to record a CAGR of 5.14% in terms of revenue and 3.45% in terms of volume during the forecasted period, 2024-2032. The regional market's growth is accredited to the initiation of new projects, the augmenting wind and solar sector, and the increase in electricity generation from renewable energy sources.

MARKET INSIGHTS

The Europe renewable methanol market growth assessment covers the in-depth evaluation of the Germany, the United Kingdom, Netherlands, Italy, Spain, France, Poland, and Rest of Europe. As one of the major markets for renewable methanol, France aimed to produce 23% of its total energy demands from renewable energy by the year 2021. This target is anticipated to fuel the need for renewable methanol in the country. Moreover, renewable methanol is increasingly used in transport fuels and maritime applications, as well.

On the other hand, under the Multiannual Energy Program, France has proposed to minimize the consumption of fossil fuels by 40% by 2030, from its levels in 2012. This approach would ensure a fair, clear, as well as sustainable energy transition in the country. Furthermore, the plan also entails phasing out of coal by 2022, boosting renewable energy development with a central focus on solar and wind, and decommissioning nuclear reactors. As a result, these factors are anticipated to play an essential role in supplementing the renewable methanol market growth in Europe across the forecasting years.
