### **Report description:**

The South Africa data center colocation market is expected to grow at a CAGR of 15.42% from 2023 to 2029.

South Africa has around 51 operational colocation data centers. Most are being developed according to Tier III standards. The South Africa data center colocation market has the presence of both local and global operators, such as Teraco (Digital Realty), Africa Data Centres, Open Access Data Centres (OADC), Digital Parks Africa, NTT DATA, and Others.

In South Africa, Johannesburg is the prominent data center destination. In addition, it is well connected to other major cities in Africa and Europe, the Middle East, and Asia, making it an ideal location for a data center. Furthermore, the average rack power density in South Africa is around 4-5 kW as of 2024, which is likely to increase to 6-8 kW by 2029 on account of increased deployment of big data, IoT, AI, and ML workloads and the expansion by hyperscalers/cloud operators in the market.

The South Africa data center colocation market has a presence of several retail, wholesale, and hybrid colocation operators. Retail operators include Open Access Data Centres (OADC), Digital Parks Africa, Business Connexion, MTN, Vodacom Business.

Wholesale operators include Africa Data Centres, Teraco (Digital Realty), Vantage Data Centers, and NTT DATA. Moreover, Equinix and Paratus are the new entrants in the industry. These companies are likely to disrupt and increase competition in the industry.

The industry market share of several existing companies is likely to come down in the next 2-3 years due to the entry of several new players in the market, with nearby countries such as Nigeria and Kenya growing.
