Report description:

The Ph based lipstick Market size will grow at 2.6% CAGR during 2024-2032, driven by the expansion of e-commerce and online beauty retail platforms.

The eCommerce market is projected to generate \$5.5 trillion in revenue, with sales expected to account for 23% of the global retail sector by 2027. With the increasing shift towards online shopping, consumers now have easier access to a wide range of beauty products, including specialized and niche lipsticks that may not be available in traditional brick-and-mortar stores. This accessibility has led to a surge in the popularity of Ph-based lipsticks, as consumers can explore and experiment with new products more readily. Additionally, the rise of online beauty influencers and social media marketing has further fueled the growth of these platforms, making it easier for brands to reach and engage with their target audiences.

The Ph-based lipstick Industry is classified based on product, ingredient, price range, distribution channel, and region.

The shimmery product segment will expand rapidly through 2032, as consumers increasingly seek to make bold, glamorous statements. Shimmery lipsticks, known for their reflective qualities and eye-catching appeal, have become a staple in many beauty routines. These lipsticks not only enhance the natural allure of the lips but also add a touch of sophistication and glamour to any look. Beauty brands are capitalizing on this trend by incorporating advanced technologies and high-quality ingredients to create lipsticks that provide a dazzling finish while ensuring comfort and durability.

The gel lipsticks segment will witness decent progress through 2032. Owing to its smooth, gel-like texture, these lipsticks offer a unique alternative to traditional formulations. The gel finish provides a lightweight, non-drying feel, making it ideal for consumers seeking a comfortable and hydrating lip product.

Gel lipsticks are particularly appreciated for their ability to deliver a high-impact color with a glossy, modern finish. This innovative formulation enhances the lips' natural beauty while providing a lasting, vibrant hue. The rise of gel lipsticks reflects a broader shift towards multifunctional beauty products that offer both aesthetic appeal and practical benefits.

Europe Ph-based lipstick industry will grow at a fast pace through 2032, characterized by its diverse consumer preferences, with a notable inclination towards high-quality, innovative lip products. This trend is evident in the increasing popularity of both shimmery and gel lipsticks, as European consumers are seeking products that offer unique finishes and advanced formulations.
