- Enterprisewide License \$5999.00

Report description:

The global polyimide film market size reached US\$ 2.2 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 3.7 Billion by 2032, exhibiting a growth rate (CAGR) of 5.7% during 2024-2032. The market is experiencing steady growth driven by the increasing demand in electronics and electrical industry, advancements in aerospace and automotive sectors, growing applications in renewable energy and medical devices, escalating demand in the telecommunications industry, and increased use of films in high-temperature applications.

Polyimide Film Market Analysis:

- **Major Market Drivers:** The primary drivers impelling the market include the growing demand for flexible printed circuits in electronics, advancements in the aerospace and automotive sectors, and increasing applications of the product in renewable energy and medical devices.
- **Key Market Trends:** Key trends involve innovations in product development including focusing on enhancing thermal stability and electrical insulation properties. According to polyimide film market research, there is a notable shift towards eco-friendly polyimide films and increased integration in high-frequency communication devices due to the rise of 5G technology.
- **Geographical Trends:** Asia Pacific leads the market with the largest share, driven by its robust electronics manufacturing industry, rapid industrialization, and substantial investments in advanced manufacturing technologies. This regional dominance is expected to continue, sustaining the positive market dynamics.
- **Competitive Landscape:** Some of the major market players in the polyimide film industry include DuPont, Kaneka Corporation, SKC Kolon PI, Toray Industries, Taimide Tech, and Arakawa Chemicals. These companies are expanding product portfolios and

www.scotts-international.com

production capabilities, creating a positive polyimide film market outlook.

-□Challenges and Opportunities: Some of the challenges encountered in the market include the high costs of production and strict regulatory demands. However, advances are being made in the area of creating new eco-friendly polyimide films and the diversification of their applications in new technology. Recent studies on the polyimide film market provide insights on new growth opportunities as they provide information about the emerging regions, especially in the Asia Pacific region.

Polyimide Film Market Trends:

Growing applications in renewable energy and medical devices

The application of polyimide in renewable energy (RE) and medical industries is rapidly increasing, consequently driving the polyimide film market growth. In the RE sector, polyimide films are widely used as an insulating layer and in renewable technology like solar and wind energy since it has high performance in extreme temperatures changing weather conditions. This is due to the emerging trend for global green energy solutions. The functions of polyimide films in the medical field are in medical tubes, circuits, and insulation of the medical devices and circuits boards of the medical instruments. The expansion of the number of hospitals and health care centers and the demand for better equipment to facilitate them also helps in the growth of the market.

Advancements in aerospace and automotive sectors

The polyimide film market value is significantly influenced by improvements in the aerospace and automotive sectors. These industries need composite materials for high-temperature applications, resistance to chemicals and stress-independent mechanical properties. Polyimide films satisfy these demanding standards, due to which they are widely used in electrical insulation, gasketing, and protective, high-temperature coatings in engines and intricate components. The rising concerns regarding emissions control, as well as the gradually emerging market for electric vehicles, are also creating a positive market outlook. Also, the ongoing advancements in aerospace engineering continuously focusing on enhancing the efficiency and reliability of aircrafts propels the market growth.

Increasing demand in electronics and electrical industry

Polyimide films have been widely recognized due to their high thermal stability, high voltage electrical insulating ability, and mechanical strength. These qualities of PVDF make the products indispensable in the production of flexible printed circuits, pressure-sensitive tapes, as well as other related electronics products. The mobile electronics and the electronics packed in small and complex products are moving towards high reliability in small size and lightweight materials thus driving the polyimide films. Also, a considerable increase in the usage of consumer electronics and improvement in telecommunications networks working in tandem further creates a positive outlook for the polyimide film market overview as these films play a vital role in increasing the efficiency and durability of devices.

Polyimide Film Market Segmentation:

IMARC Group provides an analysis of the key trends in each segment of the market, along with forecasts at the global, regional, and country levels for 2024-2032. Our report has categorized the market based on application, distribution channel and end use.

Breakup by Application:

- Flexible Printed Circuit
- Wire and Cable
- Pressure-Sensitive Tape
- Specialty Fabricated Product
- Motor/Generator
- Others

Flexible printed circuit accounts for the majority of the market share

The report has provided a detailed breakup and analysis of the market based on the application. This includes flexible printed circuit, wire and cable, pressure-sensitive tape, specialty fabricated product, motor/generator, and others. According to the report,

Scotts International. EU Vat number: PL 6772247784

tel. 0048 603 394 346 e-mail: support@scotts-international.com

www.scotts-international.com

flexible printed circuit represented the largest segment.

Flexible printed circuits (FPCs) account for the largest share of the polyimide film market scope as they play significant roles in several sectors. Polyimide films are crucial in FPC's due to its flexibility, high heat resistance and dielectric features. These attributes are crucial for miniaturization and the ability to improve the performance of various electronics items. FPCs are employed in portables and information appliances, automotive applications, healthcare and measuring instruments, and telecommunications and computer peripheral products. Further, the growth of the polyimide films market can be attributed by the increasing need for thin, flexible, lightweight and high strength electronic circuits can be realized through high performance polyimide films.

Breakup by Distribution Channel:

- Specialty Stores
- Online Stores
- Others

A detailed breakup and analysis of the market based on the distribution channel have also been provided in the report. This includes specialty stores, online stores, and others.

Breakup by End Use:

- Electronics
- Aerospace
- Automotive
- Labelling
- Others

Electronics exhibits a clear dominance in the market

A detailed breakup and analysis of the market based on the end use have also been provided in the report. This includes electronics, aerospace, automotive, labelling, and others. According to the report, electronics accounted for the largest market share.

The electronics sector dominates the market due to the increasing demand for advanced electronic components and devices, thereby contributing to the polyimide film market revenue. The films are crucial in the production of flex printed circuits, circuit insulating tapes and various other parts as they possess desirable qualities of electrical conductivity and heat resistance. Moreover, considerable rise in the adoption of devices such as smart phone and tablet computers, and other wearable gadgets is augmenting this demand. Moreover, the IoT market, which currently experiences rapid growth, requiring compact and efficient electronic systems, also contributes to the need for films based on polyimide. The importance of polyimide films in this sector underlines the significance of this material in sustaining technological advancements and the stability of electronic equipment.

Breakup by Region:

- North America
 - o□ United States
 - o□ Canada
- Asia-Pacific
 - o□ China
 - o□ Japan
 - o□ India
 - o□ South Korea
 - o□ Australia
 - o□ Indonesia
 - o□ Others
- Europe

- o Spain
- o Russia
- o Others
- Latin America
- o Brazil
- o Mexico
- o Others
- Middle East and Africa

Asia Pacific leads the market, accounting for the largest polyimide film market share

The report has also provided a comprehensive analysis of all the major regional markets, which include North America (the United States and Canada); Asia Pacific (China, Japan, India, South Korea, Australia, Indonesia, and others); Europe (Germany, France, the United Kingdom, Italy, Spain, Russia, and others); Latin America (Brazil, Mexico, and others); and the Middle East and Africa.

According to the report, Asia Pacific represents the largest regional market for polyimide film.

Asia Pacific holds the largest segment in the polyimide film market share due to the strong electronics manufacturing industry and rapid industrialization in the region. The electronics industry is highly developed especially in countries, such as China, Japan, and South Korea. Since polyimide films are a crucial component of electronics, there is huge demand for the films. The region's strong economic growth, growing demand for consumer electronics, and rising capital expenditures on sophisticated manufacturing technologies contribute to its leadership position. Similarly, the strategic realignment of dominant market participants, enhanced social environment, and access to good input materials augments the region's influence.

Competitive Landscape:

The market research report has also provided a comprehensive analysis of the competitive landscape in the market. Detailed profiles of all major companies have also been provided. Some of the major market players in the polyimide film industry include:

- Arakawa Chemicals Industries Ltd
- Compagnie de Saint-Gobain S.A.
- Flexcon Company Inc.
- I.S.T Corporation
- Kaneka Corporation
- Kolon Industries Inc.
- Shinmax Technology Ltd
- Taimide Tech Inc.
- Toray Industries Inc.
- UBE Industries Limited

(Please note that this is only a partial list of the key players, and the complete list is provided in the report.)

According to polyimide film market analysis, major manufacturers in the industry are constantly broadening their offering and improving their production capacity to address increasing requirements. Businesses are committed to research and development to enhance and improve the polyimide film features to conform to the technologically demanding industries. Some of the other forms include strategic partnerships and mergers with the objective of strengthening the market position and coverage area. Apart from this, several companies have now shifted towards using sustainable polyimide films. These efforts are in line with the international strategy to embrace sustainable production techniques in the manufacturing processes. Furthermore, according to the polyimide film market forecast, key vendors are seeking new opportunities in the global polyimide market and are expanding

Scotts International. EU Vat number: PL 6772247784

www.scotts-international.com

their operations in Asia Pacific, due to healthy industrial growth and growing electronics industry in the region.

Polyimide Film Market News:

-□ On 28th February 2024, Kolon Industries Inc. signed a memorandum of understanding with SK Microworks, a polyethylene terephthalate (PET) film producer under Korean private equity investor Hahn & Co., to set up an industrial film developing and producing joint venture.

-□ On 8th June 2023, Toray Industries, Inc., announced that the company will again increase production capacity for Torayfan biaxially oriented polypropylene film at the Tsuchiura Plant in Ibaraki Prefecture.

Key Questions Answered in This Report

1. What was the size of the global polyimide film market in 2023?
2. What is the expected growth rate of the global polyimide film market during 2024-2032?
3. What are the key factors driving the global polyimide film market?
4. What has been the impact of COVID-19 on the global polyimide film market?
5. What is the breakup of the global polyimide film market based on the application?
6. What is the breakup of the global polyimide film market based on the end use?
7. What are the key regions in the global polyimide film market?
8. Who are the key players/companies in the global polyimide film market?
