

Global Data Center Fire Detection & Suppression Market Landscape 2024-2029

Market Report | 2024-10-28 | 162 pages | Arizton Advisory & Intelligence

AVAILABLE LICENSES:

- Single User License \$4500.00
- Team License \$5500.00
- Enterprisewide \$6500.00

Report description:

The global data center fire detection and suppression market by investment is expected to grow at a CAGR of 11.79% from 2023 to 2029.

KEY TRENDS

Innovations in Fire Suppression Systems

The data center fire detection and suppression market has experienced continuous growth in recent years, driven by the constant innovation of new products and technologies in fire and safety. Such innovations include clean agent fire suppression systems, water mist systems, aerosol-based suppression systems, advanced early detection systems, hybrid fire suppression systems, and others. Furthermore, these innovations aim to ensure maximum protection while minimizing risks to both equipment and personnel in high-tech data centers. Fire suppression technologies now increasingly focus on preventing damage from fire while aligning with sustainability and operational efficiency goals.

AI in Fire Detection & Suppression

In recent years, the data center fire detection and suppression market has seen numerous technological advances. These innovations brought about significant improvements in the fire detection and suppression industry. AI and IoT are game changers in the fire detection and suppression markets in data centers. They provide advanced safety and protection for data centers. Furthermore, AI and IoT companies have redefined the way fire detection systems work. ML, being a powerful subset of AI, led to better task execution in real-time. On the other hand, IoT enhanced the level of communication between devices and humans through effective intelligent technology. These innovations represent a major leap forward in ensuring the safety and operational integrity of data centers, which house critical digital infrastructure.

GEOGRAPHICAL ANALYSIS

Scotts International. EU Vat number: PL 6772247784

tel. 0048 603 394 346 e-mail: support@scotts-international.com

www.scotts-international.com

- North America and Europe are growing steadily, with major investments witnessed in the U.S., Canada, the UK, Germany, Spain, Norway, and others. For instance, North America contributed to around 46.3% of the overall investment in the global data center fire detection and suppression market.
- Latin America, Africa, and the Middle East are in the early stages of the adoption of advanced fire detection and suppression systems. In contrast, major markets in North America and Europe started witnessing the adoption of several advanced technologies in the market.
- Middle East & Africa contributed to around 4.3% of the overall investment in the global data center fire detection and suppression market. Countries such as the UAE, Saudi Arabia, Israel, and South Africa are considered among the primary markets in the region.
- APAC is among the fastest growing data center markets in terms of the number of data center investments and thus emerged as a dominant location for emerging demand for fire safety products. Some of the emerging data center markets include Malaysia, Indonesia, South Korea, New Zealand, the Philippines, Thailand, and other locations.

Segmentation by Geography

- North America
 - o□US
 - o□Canada
- Latin America
 - o□Brazil
 - o□Mexico
 - o□Chile
 - o□Colombia
 - o□Rest of Latin America
- Western Europe
 - o□UK
 - o□Germany

- o Japan
- o South Korea
- o Taiwan
- o Rest of APAC
- Southeast Asia
- o Singapore
- o Indonesia
- o Malaysia
- o Thailand
- o Philippines
- o Vietnam
- o Other Southeast Asian Countries

COMPETITIVE LANDSCAPE

- The data center fire detection and suppression market witnesses continuous competition among global vendors offering fire detection and suppression systems. Rapidly developing technologies and innovation in the market have forced several vendors to offer more innovative solutions for the data center industry.
- Vendors are offering fire and safety solutions connected to the internet so that the systems can be handled remotely. The number of power outages faced by data centers is increasing; hence, vendors are focusing on efficient and reliable systems that protect the facility and avoid downtime.
- The primary fire suppression systems used in data centers typically consist of wet pipe sprinklers, pre-action sprinklers, and special fire suppression agents such as clean agent fire extinguishants, inert gas like nitrogen or argon, or high-pressure water mist fire suppression systems. The adoption of fire suppression systems depends on the design of the facility.

Fire Detection & Suppression Providers

- Automatic
- AWA PREVENT
- Cannon Fire Protection
- Carrier
- Danfoss Fire Safety
