### **Report description:**

The Global Dimethyl Carbonate Market was valued at USD 1.1 billion in 2023 and is projected to expand at a CAGR of 8.2% from 2024 to 2032. This growth trajectory is primarily fueled by the surging demand for eco-friendly chemical alternatives across diverse industries, notably in the manufacturing of polycarbonate plastics.

With rising demand for high-performance plastics, particularly polycarbonate, in sectors like automotive, electronics, and construction, the market is set for substantial growth. Dimethyl carbonate, recognized for its reduced environmental impacts compared to conventional solvents and reagents, has emerged as a pivotal ingredient in these sectors, especially amidst the industry's shift towards sustainable materials and processes.

Given its less toxic nature and ability to boost battery performance and safety, dimethyl carbonate is poised to see increased adoption in battery manufacturing. Furthermore, trends, such as the emphasis on circular economy practices and the emergence of bio-based dimethyl carbonate are expected to influence the market, resonating with global sustainability objectives and the rising consumer preference for eco-friendly products. The market demand is also bolstered by increasing approvals and licensing trends.

The dimethyl carbonate industry is divided based on application and region.

Forecasted to surpass USD 1.2 billion by 2032, the polycarbonate application segment is set to gain substantial momentum. As a vital raw material for polycarbonate production, dimethyl carbonate plays a crucial role in creating high-performance plastics. These plastics find applications in automotive components, electronics, and construction materials. The surging demand for lightweight, durable, and impact-resistant materials in these sectors propels segment growth. Moreover, the industry's push to minimize carbon footprints in manufacturing has spotlighted dimethyl carbonate as a greener substitute for phosgene in polycarbonate production.

By 2032, the Asia Pacific dimethyl carbonate market is anticipated to demand over 800 kilotons. The APAC region is witnessing a robust surge in dimethyl carbonate (DMC) demand, spurred by its diverse industrial applications. As an essential ingredient in lithium-ion battery electrolytes, DMC's demand is escalating, paralleling the boom in electric vehicle (EV) production and the expanding consumer electronics sector. Countries like China and India, undergoing rapid industrialization and urbanization, are
