Report description:

The Netherlands is very much a cycling nation, with the country also boasting an efficient and affordable public transport network. However, the Netherlands is also the leader in EV charger development in Europe, with a particularly large number of charging points in the Randstad region in the west of the country. However, there is room for improvement, given that just 3% of Dutch chargers offer DC power, making the country one of the worst performing in Europe for fast and ultra-fast charging.

Euromonitor International's Mobility in Netherlands report offers a comprehensive guide of the traditional and newly emerging mobility forms. The report is broken down into five key areas of industry research: automotive sales and ownership, electric and alternative fuel vehicles, shared mobility, public transport, and autonomous vehicles and connectivity. It provides the latest automotive sales and registration and shared mobility data over 2015-2020, allowing you to identify the sectors driving growth. It assesses the strategic analysis of key factors influencing the market - be they legislative, consumer lifestyle or economic. Forecasts in the reports are available to 2025.

Product coverage: Car Rental, Car Traffic Volume, Distances Travelled by Mode of Transport, Electric Charging Stations, Fuel Prices, Light Vehicle Sales, Light Vehicle Sales by Level of Autonomy (0-5), Shared Mobility, Vehicle Production, Vehicle Registrations, Vehicles in Use.

Data coverage: market sizes (historic and forecasts), company shares, brand shares and distribution data.
