Report description:

The Brazil medical aesthetics market is expected to grow at a CAGR of 11.98% from 2023 to 2029.

KEY TAKEAWAYS

- By Product Type: The injectables segment occupied a major share of 45% as the rise in injectable procedures mirrors broader trends in the cosmetic industry.
- By Procedure: The non-invasive segment accounted for the largest market share as it is safer and more efficient in cosmetics enhancements.
- By Gender: The men segment shows the fastest growth, with a CAGR of 13.77% in the Brazil medical aesthetics market, as they are accepting aesthetic treatment to look polished and have a professional appearance.
- By Application: The skin rejuvenation segment dominates and has the largest market share due to the rise in demand for non-surgical cosmetic treatments.
- By End-User: The medical spa segment shows the highest growth during the forecast period due to heightened awareness of self-care and wellness.
- By Age Group: The 34-50 years segment holds the largest market share as these demographic individuals are more drawn toward beauty standards, making them spend on medical aesthetics to maintain a youthful appearance.
- Growth Opportunity: The Brazil medical aesthetics market is set to grow with the rising demand for minimally invasive aesthetic procedures and a rise in personalized aesthetic treatments.

MARKET TRENDS & DRIVERS

Increasing Demand for Neurotoxins

Adopting neurotoxins, particularly Botulinum toxin (commonly known as Botox), has seen a significant rise in the country, transforming the landscape of medical aesthetics. This surge is driven by the increasing demand for non-surgical, minimally

www.scotts-international.com

invasive cosmetic procedures that offer effective and quick results with minimal downtime. Neurotoxins are primarily used to reduce the appearance of fine lines and wrinkles by temporarily paralyzing the underlying muscles, leading to smoother and more youthful-looking skin. The popularity of these treatments has expanded beyond traditional cosmetic applications to include therapeutic uses, further broadening their appeal and market growth. One of the major factors contributing to the rise in neurotoxin adoption is the growing awareness and acceptance of aesthetic procedures. Social media platforms, celebrity endorsements, and the proliferation of beauty influencers have played a crucial role in normalizing cosmetic enhancements. This has increased consumer interest and willingness to undergo such treatments, particularly among younger demographics seeking preventive measures against aging. The accessibility and affordability of neurotoxin treatments have also improved, making them more attainable for a broader audience. The therapeutic applications of neurotoxins have also contributed to their widespread adoption. Beyond cosmetic uses, neurotoxins are employed in the treatment of various medical conditions, such as chronic migraines, hyperhidrosis (excessive sweating), muscle spasticity, and even depression. These therapeutic benefits have been well-documented and accepted within the medical community, leading to increased utilization in clinical settings. Neurotoxins' dual cosmetic and therapeutic applications provide a compelling value proposition, driving their adoption across different medical specialties.

Growing Demand for Minimally-invasive Aesthetic Procedures

The growing demand for minimally invasive aesthetic procedures has become a significant trend in the medical aesthetics industry, driven by technological advancements, changing patient preferences, and the increasing desire for procedures that offer effective results with minimal downtime and risk. This shift towards less invasive treatments has reshaped the landscape of cosmetic enhancements, making them more accessible and appealing to a broader range of individuals. One of the primary factors driving the demand for minimally invasive aesthetic procedures is the advancement in medical technology. Innovations in lasers, injectables, and energy-based devices have revolutionized the field, providing effective alternatives to traditional surgical methods. Procedures such as Botox injections, dermal fillers, laser skin resurfacing, and non-surgical fat reduction have become increasingly popular due to their ability to deliver noticeable improvements with fewer complications and shorter recovery periods compared to surgical options. These technological advancements have significantly enhanced the safety, efficacy, and precision of minimally invasive treatments, making them a preferred choice for many patients. The increasing awareness and acceptance of aesthetic procedures have also played a crucial role in the rising popularity of minimally invasive options.

Increasing Consumer Base for Aesthetics

The increasing consumer base for aesthetics is a testament to the growing demand for cosmetic procedures and treatments across diverse demographics. This expansion is driven by several factors, including societal acceptance, technological advancements, improved accessibility, and shifting cultural perceptions about beauty and self-care. One of the significant factors contributing to the increasing consumer base is the broadening societal acceptance of aesthetic procedures. Once considered a luxury for the wealthy or a taboo subject, cosmetic enhancements have become mainstream. Influencers, celebrities, and social media platforms have played a crucial role in normalizing these procedures, openly discussing their experiences and sharing results. This visibility has reduced the stigma associated with aesthetic treatments, encouraging more people to consider and undergo such procedures. Technological advancements in medical aesthetics have also significantly contributed to the growing consumer base. Innovations in non-invasive and minimally invasive procedures, such as laser treatments, injectables, and body contouring technologies, offer effective results with minimal downtime and reduced risk compared to traditional surgical methods. These advancements have made aesthetic treatments more appealing to a broader audience, including individuals who might have previously hesitated due to concerns about safety or recovery time.

INDUSTRY RESTRAINTS

Scarcity of Qualified Aestheticians

Scotts International. EU Vat number: PL 6772247784

tel. 0048 603 394 346 e-mail: support@scotts-international.com

www.scotts-international.com

The scarcity of qualified aestheticians is a pressing issue within the beauty and wellness industry, impacting service quality and skilled professionals' availability to meet growing consumer demand. Aestheticians are crucial in providing a range of skincare treatments, from facials and peels to more advanced procedures like laser therapies and microdermabrasion. Moreover, the misconception that aesthetics is primarily about pampering rather than professional skincare can deter individuals from pursuing formal training and certification. This perception undermines the importance of aestheticians as healthcare professionals who can address various skin conditions and concerns through evidence-based treatments. Addressing the scarcity of qualified aestheticians requires concerted efforts from multiple stakeholders. Education institutions and industry associations can collaborate to standardize curricula, enhance training programs, and establish clear pathways to licensure or certification. Regulatory bodies are crucial in setting and enforcing standards that ensure practitioners meet minimum competency requirements.

SEGMENT INSIGHTS

INSIGHTS BY PRODUCT TYPE

The Brazil medical aesthetics market by product type is segmented into injectables, energy-based devices, cosmetic implants, and cosmeceuticals/skin care. The injectables segment occupied a major market share of 45%. The rise in injectable procedures mirrors broader trends in the cosmetic industry, where non-invasive treatments continue to gain traction due to their convenience, minimal downtime, and effective results. Consumers are increasingly opting for injectables as a preventive measure against aging or to enhance facial features without undergoing surgery. This shift is supported by ongoing advancements in injectable technologies and formulations catering to diverse aesthetic goals and preferences. Injectable medical aesthetics encompass several key segments, primarily botulinum toxin (Botox) and dermal fillers. Botox is widely popular for its ability to reduce wrinkles and fine lines, providing a non-invasive alternative to surgical procedures. Dermal fillers, especially those based on hyaluronic acid, are used for facial volume restoration, wrinkle reduction, and lip enhancement. The growing popularity of these procedures is linked to their minimal downtime and immediate results, appealing to a population increasingly inclined towards quick and effective beauty solutions.

-□By Product Type

- o□Injectables
- o□Energy-based Devices
- o□Cosmetic Implants
- o□Cosmeceuticals/Skin Care

INSIGHTS BY PROCEDURE

The Brazil medical aesthetics market by procedure is categorized into non-invasive and minimally invasive. The non-invasive segment dominates and has the largest market share. The growing awareness and increasing availability of non-invasive aesthetic procedures drive their acceptance and popularity in Brazil. These procedures, which offer numerous advantages regarding safety and efficacy, have become a preferred choice for many seeking cosmetic enhancements without surgery. Non-invasive treatments do not require incisions, making them less risky and more appealing to a broader audience. The country's expanding middle class is becoming more health-conscious and beauty-oriented, with a growing willingness to invest in advanced aesthetic treatments. Furthermore, social media and celebrity endorsements have played a significant role in shaping beauty standards and driving demand for these procedures.

o Minimally Invasive

INSIGHTS BY GENDER

The Brazilian medical aesthetics market is segmented by gender into men and women. The men's segment shows significant growth, with the fastest-growing CAGR of 13.77% during the forecast period. The field of medical aesthetics for men in Brazil is witnessing a notable surge in interest and demand. Traditionally, aesthetic treatments were predominantly associated with women, but this trend is shifting as more men seek to enhance their appearance and maintain a youthful look. This growing acceptance among men is driven by a heightened awareness of personal grooming and the desire to achieve a polished and professional appearance, reflecting broader Brazil trends where male aesthetics are increasingly embraced. Several factors contribute to the rise of medical aesthetics among men in Brazil. Firstly, the societal perception of masculinity is evolving, with greater acceptance of men investing in cosmetic procedures as part of their self-care routine. Men are increasingly prioritizing their appearance, driven by influences from media, fashion, and lifestyle trends that emphasize a well-groomed and youthful look.

- By Gender

o Women

o Men

INSIGHTS BY APPLICATION

Based on the application, the skin rejuvenation segment holds the largest share of the Brazil medical aesthetics market. The segment is experiencing notable growth as the demand for non-surgical cosmetic treatments continues to rise. This market segment focuses on procedures designed to improve skin texture, tone, and overall appearance, catering to a growing population keen on maintaining youthful and healthy skin. The increasing interest in skin rejuvenation can be attributed to various factors, including heightened skincare awareness, technological advancements, and a rising middle class with more disposable income to spend on cosmetic enhancements. Technological advancements have significantly contributed to the growth of the skin rejuvenation market. Innovations in laser technology, such as fractional lasers and intense pulsed light (IPL), have enhanced the efficacy and safety of skin rejuvenation procedures. These technologies allow for precise targeting of skin issues with minimal discomfort and reduced recovery times.

- By Application

o Skin Rejuvenation

o Body Contouring & Skin Tightening

o Breast Augmentation

o Hair Removal

o Others

INSIGHTS BY END-USER

Based on the end-user, the medical spa segment shows the highest growth in the Brazil medical aesthetics market during the forecast period. The segment is rapidly gaining prominence within the broader medical aesthetics sector, reflecting a growing trend towards combining wellness with advanced aesthetic treatments. Medical spas or medspas offer a range of non-surgical aesthetic procedures in a luxurious and relaxing environment, blending medical expertise with spa-like amenities. This model appeals to a diverse clientele seeking effective yet non-invasive beauty and wellness solutions. In Brazil, medical spas are increasingly popular due to the rising demand for aesthetic treatments and a heightened awareness of self-care and wellness. These establishments provide various services, including injectables such as Botox and dermal fillers, laser treatments, skin rejuvenation procedures, and body contouring. Integrating medical aesthetics with spa experiences allows clients to enjoy both

INSIGHTS BY AGE GROUP

Based on the age group, the 34-50 years segment dominates with the largest share in the Brazil medical aesthetics market. The demographic segment of individuals aged 34 and 50 represents a significant and growing audience for medical aesthetics. This age group is increasingly drawn to aesthetic treatments due to a combination of factors, including evolving beauty standards, heightened self-awareness, and the pursuit of maintaining a youthful appearance. As individuals in this age range are typically established in their careers and have disposable income, they are more likely to invest in cosmetic procedures to enhance their appearance and boost self-confidence. This age group also tends to be more informed about aesthetic procedures and their benefits through digital media and social networks. As a result, they are more likely to seek out treatments that are not only effective but also safe and performed by qualified practitioners. The rising demand for preventive and corrective treatments reflects this demographic's growing awareness and acceptance of medical aesthetics.
