### **Report description:**

The Global Boron Minerals And Chemicals Market was valued at USD 13.1 billion in 2024 and is projected to grow at a CAGR of 3.3% from 2025 to 2034. This growth is largely driven by the increasing adoption of boron compounds in diverse applications such as glass, ceramics, detergents, alloys, agrochemicals, and energy-efficient products bolstered by supportive government regulations.

Boron compounds are non-phosphate, eco-friendly agents widely used in household cleaning products, offering a safe alternative to petrochemical detergents. Boron minerals, which contain varying concentrations of boron oxide, are essential raw materials for numerous industries, including agriculture, textiles, and construction. Among these minerals, colemanite and ulexite hold significant commercial value due to their extensive applications.

The demand for borate-based compounds in detergents is increasing due to their environmentally friendly properties. These compounds leave no residues, making them highly desirable for cleaning products. The market is further supported by the growing preference for sustainable cleaning solutions. Additionally, boron minerals like colemanite are becoming integral in producing industrial materials, including heat-resistant glass, and are gaining traction in medical and cosmetic sectors.

In 2024, colemanite-based products generated over USD 1.6 billion in revenue and are expected to surpass USD 2.2 billion by 2034. This mineral plays a key role in manufacturing various industrial and consumer products due to its unique chemical properties. Moreover, colemanite is utilized as a boron source in ceramic glaze production, enhancing surface smoothness and improving product quality.

The glass and ceramics segment of the boron minerals market is projected to reach USD 12.1 billion by 2034. Boron compounds like borax and boric acid are essential in producing heat-resistant glass and industrial-grade ceramics. The recovery of the construction industry in North America and Europe has further boosted demand for these materials while expanding economies in
