### **Report description:**

The Global Metal Alloys Market was valued at USD 343.7 billion in 2024 and is expected to grow at a CAGR of 4.5% between 2025 and 2034. Key drivers of this growth include advancements in additive manufacturing and the expanding demand for flexible packaging. Metal alloys are materials created by combining two or more metals, or a metal and a non-metal, to achieve specific properties such as enhanced strength, hardness, and lightness. These unique characteristics make metal alloys crucial for a wide array of industries, including transportation, construction, machinery, and packaging, further fueling market expansion.

The market is divided by material type, with segments including aluminum alloy, stainless steel alloy, bronze alloys, nickel alloys, and others. Among these, aluminum alloys generated USD 174 billion in revenue in 2024 and are projected to reach USD 263.2 billion by 2034. Aluminum alloys are favored for their lightweight nature and corrosion resistance, making them highly suitable for industries such as automotive, aerospace, and marine. As vehicle production continues to rise globally, the demand for aluminum alloys, especially in transportation, is also growing, driven by their superior durability and low maintenance.

By application, the market is segmented into transportation, construction, packaging, machinery, electrical, and other industries. The transportation sector commands the largest share, accounting for 37.9% share. This growth is largely attributed to the increasing demand for lightweight vehicles, including cars and commercial vehicles, because of improving economic conditions and rising consumer purchasing power. The need for fuel-efficient and environmentally friendly vehicles, driven by rising fuel costs and stringent emission regulations, further supports the demand for metal alloys in the transportation sector, particularly in North America and Europe.

U.S. metal alloys market was valued at USD 38.6 billion in 2024 and is a significant contributor to regional growth. The demand for metal alloys in the U.S. is primarily driven by the thriving automotive and aerospace sectors, which require durable yet lightweight materials to improve fuel efficiency and performance. Additionally, the construction industry is a major consumer of metal alloys, particularly stainless steel and other corrosion-resistant materials essential for modern infrastructure projects. The ongoing push
