Report description:

The United States copper sulphate market size was valued at 102.85 Kilo Tons in 2024. Looking forward, IMARC Group estimates the market to reach 124.91 Kilo Tons by 2033, exhibiting a CAGR of 2.07% from 2025-2033. The United States copper sulphate market size is growing significantly due to its extensive use in agriculture as a fungicide and pesticide, effectively controlling fungal diseases and pests, the mining industry's demand for copper sulfate in ore flotation processes and the chemical industry's utilization in producing various chemicals, dyes, and pigments.

Copper sulphate, also known as cupric sulphate exists in a series of compounds that differ in their degree of hydration. Copper sulphate occurs naturally as a rare mineral known as chalcocyanite which is pale green or gray-white in colour. It is also produced industrially by treating copper metal or its oxides with hot concentrated sulfuric or dilute sulfuric acid, respectively.

As copper sulphate is highly soluble and dissolves readily in a wide range of materials, it is used in diverse industries. For instance, as an electrolyte in copper refining and electroplating. Apart from this, the mining industry employs it as an activator in the concentration of certain ores by froth flotation. Moreover, the building trade uses copper sulphate, in combination with other chemicals, as a wood preservative. In agriculture industry, copper sulphate is widely used as a micronutrient in animal feeds and fertilizers. Its fungicidal properties are used in the growing of grapes and tree fruits (Bordeaux mixture) and in animal hoof health applications.
