- Enterprise Site License \$10000.00

Report description:

The global mining lubricants market is projected to grow from USD 4.00 billion in 2024 to USD 4.91 billion by 2030, at a CAGR of 3.5% during the forecast period. Mining lubricants play a critical role in ensuring the efficiency and longevity of heavy machinery used in mining operations. These lubricants reduce friction, minimize wear and tear, and enhance the performance of equipment operating under extreme conditions such as high loads, heavy vibrations, and harsh environmental factors. The mining lubricants market is witnessing significant growth, driven by the increasing demand for higher power-rated mining equipment with larger sump sizes. As mining operations expand to extract deeper mineral reserves and process tougher materials, there is a rising need for more powerful machinery that can handle greater workloads. These high-capacity machines require advanced lubricants that offer superior thermal stability, extended drain intervals, and enhanced protection against extreme pressure and contamination. The larger sump sizes in modern mining equipment also necessitate greater lubricant volumes, further driving market demand. "Hydraulic Oil segment, by product type, is estimated to account for the second largest share during the forecast period." Hydraulic oil is a specialized lubricant used in hydraulic systems to transfer power, reduce friction, and protect machinery from wear and tear. It plays a crucial role in mining operations, where hydraulic systems are widely used in heavy equipment such as excavators, dump trucks, drills, and loaders. Hydraulic oil enhances equipment efficiency by providing smooth and consistent power transmission while also protecting components from corrosion, extreme pressure, and temperature variations. In the mining lubricants market, hydraulic oil is expected to hold the second-largest share during the forecast period due to several key factors. The increasing adoption of advanced mining equipment with advanced hydraulic systems is a major driver, as these machines require high-performance hydraulic fluids to operate efficiently under extreme conditions. Moreover, the need for

Scotts International. EU Vat number: PL 6772247784

www.scotts-international.com

improved equipment reliability and reduced maintenance downtime is also pushing mining companies to invest in high-quality hydraulic oils with extended service life and superior wear protection, thus driving the market for mining lubricants.

"By mining techniques, underground mining segment accounted for the second largest share during the forecast period." Underground mining is a technique used to extract minerals and ores located deep beneath the Earth's surface. It involves the construction of tunnels, shafts, and chambers to access deposits that are not feasible for surface mining. Underground mining is expected to hold the second-largest share in the mining lubricants market during the forecast period due to increasing demand for deep-seated mineral reserves and the depletion of easily accessible surface deposits. The expansion of underground operations, particularly in regions with strict land use regulations and environmental concerns, further contributes to market growth. Additionally, the need for high-performance lubricants that can withstand harsh underground conditions, improve equipment longevity, and minimize downtime is driving the demand for specialized mining lubricants in this segment.

"By end-use industry, iron ore mining segment accounted for the second largest share during the forecast period." Iron ore mining is the process of extracting iron-rich rocks and minerals, primarily used in steel production. It involves various techniques, including open-pit and underground mining, depending on the depth and location of the deposits. Iron ore mining requires heavy machinery such as excavators, haul trucks, drills, and crushers, all of which rely on high-performance lubricants to ensure smooth operations, reduce wear and tear, and enhance equipment lifespan in demanding conditions like high loads, and extreme temperatures. Iron ore mining is expected to hold the second-largest share in the mining lubricants market during the forecast period due to the rising global demand for steel in construction, automotive, and infrastructure projects. The expansion of mining activities, particularly in resource-rich regions, further drives the need for reliable lubrication solutions to enhance equipment efficiency and minimize maintenance costs.

"By lubricant type, synthetic lubricants segment accounted for the second largest share during the forecast period." Synthetic lubricants offer superior properties such as higher thermal stability, oxidation resistance, extended drain intervals, and better performance in extreme temperatures. In the mining industry, synthetic lubricants are widely used in critical equipment like hydraulic systems, gearboxes, engines, and bearings to reduce friction, enhance efficiency, and extend equipment life under harsh operating conditions. Synthetic lubricants are expected to hold the second-largest share in the mining lubricants market during the forecast period due to their growing adoption in high-performance mining machinery. The increasing demand for efficient and long-lasting lubrication solutions in deep-pit and underground mining operations, where equipment operates under high pressure and temperature, is driving this segment's growth.

"North America region is estimated to account for the second largest share during the forecast period." North America is a significant market for mining lubricants, driven by extensive mining activities and the presence of major mining companies in the region. The demand for high-performance lubricants is increasing as mining operations require efficient lubrication solutions to enhance equipment lifespan, reduce downtime, and improve productivity. North America is expected to hold the second-largest share in the mining lubricants market during the forecast period due to its well-established mining sector and stringent regulations promoting high-quality, environmentally friendly lubricants. Additionally, the increasing investment in advanced mining technologies is boosting the demand for premium lubricants that support high-performance machinery. The presence of leading lubricant manufacturers and strong distribution networks further contributes to the market's steady growth in North America.

Profile break-up of primary participants for the report:

-□By Company Type: Tier 1 - 65%, Tier 2 - 20%, and Tier 3 - 15%

-□By Designation: Directors- 25%, Managers- 30%, and Others - 45%

-□By Region: North America - 30%, Asia Pacific - 40%, Europe - 20%, Middle East & Africa - 7%, and South America - 3%

Exxon Mobil Corporation (US), TotalEnergies SE (France), Shell plc (UK), Chevron Corporation (US), and BP p.l.c. (UK) are some of

Scotts International. EU Vat number: PL 6772247784

tel. 0048 603 394 346 e-mail: support@scotts-international.com

www.scotts-international.com

the major players operating in the mining lubricants market. These players have adopted acquisitions, expansions, product launches, and partnerships to increase their market share business revenue.

Research Coverage:

The report defines, segments, and projects the mining lubricants market based on product type, lubricant type, end-use industry, mining techniques, and region. It provides detailed information regarding the major factors influencing the market's growth, such as drivers, restraints, opportunities, and challenges. It strategically profiles mining lubricants manufacturers, comprehensively analyzing their market shares and core competencies, and tracks and analyzes competitive developments, such as expansions, agreements, product launches, and acquisitions.

Reasons to Buy the Report:

The report is expected to help the market leaders/new entrants by providing them with the closest approximations of revenue numbers of the mining lubricants market and its segments. This report is also expected to help stakeholders obtain an improved understanding of the market's competitive landscape, gain insights to improve the position of their businesses and make suitable go-to-market strategies. It also enables stakeholders to understand the market's pulse and provides information on key market drivers, restraints, challenges, and opportunities.

The report provides insights on the following pointers:

- Analysis of critical drivers (expanding mining industry, increased demand for specialized lubricants for high-performance machinery, rising demand for higher power-rated mining equipment with larger sump size, and impact of changing us energy policy on mining industry), restraints (volatility in raw material prices, and high costs of synthetic mining lubricants), opportunities (growing demand for bio-based and biodegradable mining lubricants, extended drainage intervals of high-performance lubricants, and supportive government policies related to modernize and boost mining activities), and challenges (electrification of mining machinery) influencing the growth of the mining lubricants market.

- Product Development/Innovation: Detailed insights on upcoming technologies, research & development activities in the mining lubricants market.

- Market Development: Comprehensive information about lucrative markets - the report analyses the mining lubricants market across varied regions.

- Market Diversification: Exhaustive information about new products, various types, untapped geographies, recent developments, and investments in the mining lubricants market.

- Competitive Assessment: In-depth assessment of market shares, growth strategies, and product offerings of leading players such as Exxon Mobil Corporation (US), TotalEnergies SE (France), Shell plc (UK), Chevron Corporation (US), BP p.l.c. (UK), Idemitsu Kosan Co., Ltd. (Japan), FUCHS (Germany), Quaker Chemical Corporation (US), LUKOIL (Russia), Whitmore Manufacturing LLC (US), and others in the mining lubricants market.
