Report description:

The Circular Economy Consulting Services Market size is estimated at USD 253.17 billion in 2025, and is expected to reach USD 379.80 billion by 2030, at a CAGR of 8.45% during the forecast period (2025-2030).

Businesses are increasingly turning to circular economy consulting services for guidance on sustainable practices, resource efficiency, and waste reduction. Consultants play a pivotal role in helping companies adopt circular business models, emphasizing product life cycles and minimizing environmental footprints. The increase in demand can be attributed to the worldwide focus on sustainability and corporate social responsibility.

These consulting services offer a comprehensive suite of solutions, ranging from lifecycle assessments and supply chain optimization to innovative product design, all aimed at reducing waste and enhancing resource efficiency. By integrating digital technologies, these services further assist organizations in navigating the complexities of transitioning to a circular economy.

An escalating awareness of environmental challenges, such as pollution, resource depletion, and climate change, has catalyzed a significant shift in customer attitudes, corporate strategies, and governmental policies. The market's growth is further propelled by mounting concerns over environmental degradation and the substantial waste output across various product segments, a trend largely influenced by the expanding global population.

The fashion and textile industry is emerging as a key player in the circular economy consulting services market, driven by the need to address environmental challenges and consumer demand for sustainable practices. This sector, which is well-known for having a large environmental impact, is actively looking for ways to switch from the conventional linear model to a more sustainable, circular one. Circular economy consulting firms are crucial in this transformation, providing expertise in designing and implementing sustainable strategies.

Major fashion brands like H&M, Patagonia, and Adidas are leading the charge, with initiatives focused on recycling, upcycling, and the use of sustainable materials. Circular economy consultants help these companies develop comprehensive sustainability plans, including the design of closed-loop supply chains where waste materials are reintegrated into production processes. Consultants also assist in setting up take-back schemes, where consumers return used garments for recycling or resale, thus extending the life cycle of products and reducing textile waste.

In addition, consultants are pivotal in helping companies innovate in material science, promoting the use of biodegradable and recyclable fibers.

Europe Leads the Way in the Circular Economy Consulting Services Market

Europe is poised to dominate the market for circular economy consulting services, with a significant share projected during the study period. This trend is largely driven by stringent carbon emission regulations and a push for sustainability, particularly through circular economy solutions, by several European governments.

European nations, going beyond regional policies, have enacted their circular economy legislation. Notably, the Netherlands stands out with its ambitious target: achieving a 100% circular economy by 2050. France, on the other hand, took a proactive stance by initially banning the destruction of unsold non-food items. The nation mandates businesses to either recycle, donate, or reuse their unsold products, including food. Moreover, France leads globally in enforcing a reparability index for electrical and electronic products. A couple of years back, the country further solidified its commitment to a circular economy by passing the Anti-waste Law, aimed at reducing waste and pollution and changing the model of the economy from linear to circular.

Circular Economy Consulting Services Industry Overview

The circular economy consulting services market exhibits a semi-fragmented nature. Key players, such as AFRY, Deloitte, Capgemini, Accenture, and Sphera, have been highlighted in the report. These firms are pivotal in steering businesses toward sustainability through the formulation and execution of circular economy strategies.
