Report description:

The Intraoral Scanners Market size is estimated at USD 728.54 million in 2025, and is expected to reach USD 824.68 million by 2030, at a CAGR of 2.51% during the forecast period (2025-2030).

The COVID-19 pandemic contributed largely to transforming the growth of intraoral scanners markets. Initially, the outbreak of COVID-19 showed a substantial effect on the intraoral scanner market because patients' visits to dental clinics and hospitals were significantly reduced due to the global social distancing and lockdown measures taken by governments. During the initial phase of the pandemic, the American Dental Association (ADA) published recommendations for dental emergency and non-emergency care. Apart from conditions involving acute pain, infection, or trauma, the removal of teeth not showing any symptoms, and restorative dentistry, which includes the treatment of asymptomatic carious lesions and cosmetic dental procedures, all were considered non-emergencies by the American Dental Association (ADA).

However, during the COVID-19 pandemic, tooth fractures, dental treatment cementation, pericoronitis, etc., were identified as emergency dental procedures. Hence, it was observed that the COVID-19 pandemic had a significant impact on the market studied. However, currently, the market has reached pre-pandemic in terms of demand for the intraoral scanner.

Additionally, the significant factors responsible for the growth of the intraoral scanner market include an increase in the geriatric population, a rise in dental disorders, and technological advancements. For instance, the high prevalence of dental caries due to unhealthy eating and lack of oral care among populations in various countries is the key factor driving the market's growth. For instance, as per the National Dental Epidemiology Program survey of 5-year-old children in England in 2022, the national prevalence of children with enamel and dentinal decay was 29.3%. As per the same source, regionally, this ranged from 23.3% in the Southwest to 38.7% in Northwest England. The introduction of intraoral scanners in the dental devices market has modernized

the dental practice landscape. These have eliminated the limitations of taking tooth impressions and helped dentists instantly transfer and manipulate data. Thus, such features are likely to increase the adoption of intraoral scanners across healthcare facilities, thereby contributing to market growth.

The increasing geriatric population is expected to facilitate market growth as the elderly population is prone to developing dental disorders because of salivary changes related to aging, consumption of a poor diet, and exposure to dental roots due to gingival recession. For instance, according to the report published by the World Economic Forum in September 2023, more than 1 in 10 people in Japan are aged 80 or over in 2023. In addition, the National Institute of Population and Social Security Research projected that those aged 65 or older will account for 34.8% of the total population in 2040. Thus a positive correlation between the senior population and an increase in incidences of tooth loss and other dental-related disorders is expected to positively impact the market growth.

Thus, factors such as rising dental disease prevalence owing to the rising geriatric population, product launches, and approvals over the forecast period are likely to facilitate market growth. However, the lack of skilled professionals in developing economies such as India and China and the high cost of intraoral scanners may restrain market growth.

Intraoral Scanners Market Trends

Standalone Devices Segment is Expected to Witness Strong Growth in The Coming Years

Standalone devices are expected to witness promising growth due to the improved workflow of dental professionals in oral scanning procedures and improved outputs of these devices. Furthermore, due to the introduction of miniature portable intraoral scanners in the market, incorporating the side-oriented tip in small intraoral scanners has made buccal surface scans much more accessible, quicker, and more effective. Thus, the enhanced output offered by these devices is expected to fuel the segment's growth.

Oral illnesses affect people throughout their lives, causing pain, suffering, disfigurement, and sometimes death. They are a significant health burden for many nations. For instance, according to the data published by the National Institute of Dental and Craniofacial Research in April 2022, it has been observed that tooth decay affects about 90% of adults aged 20 to 64 years, and gum diseases affect almost 50% of adults aged 45 to 64 years, annually, in the United States. Thus, the rising dental diseases are likely to boost the demand for intraoral scanners for effective disease detection.

Furthermore, intraoral scanners have become increasingly popular in the dental impression market due to their ability to reduce chairside time and improve the accuracy of final restorations. While traditional impression materials are still widely used, the adoption of intraoral scanners represents a significant shift toward digital dentistry, offering precision, patient comfort, and the overall quality of dental care. As technology continues to advance, the role of intraoral scanners is likely to expand further, influencing the future landscape of dental impressions in dentistry. For instance, in September 2022, 3Shape launched a wireless intraoral scanner called TRIOS 5, which features ScanAssist intelligent alignment technology that delivers the highest imaging performance and infection control standard. According to the company, TRIOS 5 Wireless features an FDA-cleared, closed autoclavable scanner tip protected by scratch-free sapphire glass to define a new level of hygiene and includes ultra-thin, snug, and near-invisible single-use sleeves to cover the scanner body and minimize the risk for cross-contamination.

Therefore, the studied sub-segment is anticipated to rise over the forecast period due to the benefits associated with scanners, the rising demand for scanners, and the growing focus by significant players on developing and marketing improved scanners.

North America is Expected to Hold a Significant Market Share During the Forecast Period

North America is expected to register significant growth over the forecast period. A rise in the geriatric population susceptible to oral disorders, an increasing number of patients suffering from dental problems, and advanced healthcare infrastructure are the key factors propelling the market growth.

The increasing tooth decay in the geriatric population can drive the demand for intraoral scanners in the United States for several reasons. Firstly, as the aging population grows, there is a higher likelihood of oral health issues, including tooth decay and loss, necessitating dental interventions. For instance, as per the April 2022 update by the National Institutes of Health (NIH), about 9 out of 10 adults aged 20 to 64 experienced tooth decay in the United States over the past 2 years. Similarly, according to the 2022 statistics published by the United Nations Population Fund, in Canada, about 19% of the population is aged 65 years and above in 2022. Thus, the growing aging population is expected to increase the burden of dental diseases and is likely to contribute to market growth. Thus, growing tooth decay in the aging population is expected to increase the demand for intraoral scanners to detect the disease and contribute to market growth over the forecast period.

Additionally, as the United States healthcare system develops and dental problems become more well-known, more people are anticipated to visit dentists and hospitals, which will support the expansion of the intraoral scanner market in the region. For instance, in October 2022, the American Diabetes Association (ADA) announced a collaborative Oral Health campaign with Pacific Dental Services (PDS). The campaign aims to increase awareness of periodontal disease (gum disease) and how oral health providers can assist patients in preventing and managing this chronic health condition. Thus, such initiatives are likely to increase awareness about dental health in the country, which is likely to augment the number of dental visits and ultimately contribute to the market growth.

Moreover, favorable reimbursement policies for dental procedures are expected to contribute to the market's growth. For instance, in September 2022, the government of Canada introduced the Canadian Dental Benefit, an immediate measure to provide low-income families (under USD 90,000 annual family income) in Canada with USD 260 – USD 650 of coverage per child under 12 years. This benefit is retroactive to cover dental expenses from October 1, 2022, and is only available for two reporting periods.

Due to technological advancements, the key market players in the country are launching new and advanced scanners, which are also expected to have a significant impact on the growth of the studied market in the region. For instance, in April 2023, Ori Dental launched the Ori Intraoral Scanner as a modern alternative to traditional dental Polyvinyl Siloxane (PVS) impressions. This intraoral dental scanner is made to be faster, lighter, more accurate, and less expensive than traditional PVS dental impressions.

Therefore, the rising geriatric population, which is more prone to dental diseases, government support initiatives, and reimbursements are anticipated to fuel the intraoral scanners market growth in the region.

Intraoral Scanners Industry Overview

The intraoral scanner market is competitive and consists of several major players. In terms of market share, a few major players dominate the market. Some companies currently dominating the market are 3 Shape AS, Align Technology Inc., Dentsply Sirona Inc., and PLANMECA OY. Furthermore, the companies adopt various strategic measures such as acquisitions, partnerships, collaborations, and new product launches to expand in the market.

- 3 months of analyst support

Table of Contents:

1 INTRODUCTION

1.1 Study Assumptions and Market Definition

1.2 Scope of the Study

2 RESEARCH METHODOLOGY

3 EXECUTIVE SUMMARY

4 MARKET DYNAMICS

4.1 Market Overview

4.2 Market Drivers

4.2.1 Rapid Technological Advancements

4.2.2 Increase in Geriatric Population

4.2.3 Rise in Dental Disorders

4.3 Market Restraints

4.3.1 Lack of Skilled Professionals

4.3.2 High Cost of Intraoral Scanners

4.4 Porter's Five Forces Analysis

4.4.1 Bargaining Power of Suppliers

4.4.2 Bargaining Power of Buyers/Consumers

4.4.3 Threat of New Entrants

4.4.4 Threat of Substitute Products

4.4.5 Intensity of Competitive Rivalry

5 MARKET SEGMENTATION

5.1 Modality

5.1.1 Standalone

5.1.2 Portable

5.2 End User

5.2.1 Dental Clinics

5.2.2 Hospitals

5.2.3 Other End Users

5.3 Geography

5.3.1 North America

5.3.1.1 United States

5.3.1.2 Canada

5.3.1.3 Mexico

5.3.2 Europe

5.3.2.1 Germany

5.3.2.2 United Kingdom

5.3.2.3 France

5.3.2.4 Italy

5.3.2.5 Spain

5.3.2.6 Rest of Europe

5.3.3 Asia-Pacific

5.3.3.1 China

5.3.3.2 Japan

Scotts International. EU Vat number: PL 6772247784
