- Team License (1-7 Users) \$5250.00
- Site License \$6500.00
- Corporate License \$8750.00

Report description:

The Neuro-gaming Technology Market is expected to register a CAGR of 5.3% during the forecast period.

Key Highlights

- Latest technologies, such as Neuro-gaming technology, are being used to create advanced gaming hardware and software. Assisting in the process, many developers have been designing advanced games to help people improve physiological factors such as brainpower, health, and skills. Neurogaming may tap into brain waves, heart rate, pupil dilation, expressions, and emotions and can help advance gaming by enabling users to interact with a console directly through the nervous system and related physiological manifestations that can be converted into gaming control signals.
- The neuro-gaming technology is leveraging major technologies such as VR, AR, and haptic sensation systems for making new games. The gaming industry is continuously evolving with the adoption of the latest technologies to capture the attention and imagination of gamers across the world. Further, technological advancements to address the disorders in Children could drive the demand for the technology.
- Factors such as the increasing development of Brain-Computer Interfaces (BCIs), increasing usage of computers, laptops, and smartphones, and the rise in the adoption of smart devices act as some of the major drivers of the market. Besides, the surge in demand for more advanced technologies capable of adding multiple functionalities and features to the games is expected to drive further the demand for neuro-gaming technology.
- The culture of Neuro-gaming technology is still at an evolutionary stage. Hence, only a limited number of neuro games and a limited number of actions included in the game are available in the market. However, the rapid developments in the software and technologies could ensure that the neuro-games become more challenging with multiple actions.
- With a significant number of enterprises operating in the end-user industries such as healthcare, education, and entertainment impacted due to the lockdown restrictions amidst COVID-19, the market growth is expected to be challenged owing to a

www.scotts-international.com

significant reduction in capital expenditure over the short term.

- Moreover, UTSA researchers launched the first worldwide Accessibility VR Game Jam, accessible to gamers with disabilities. But due to COVID-19, they worked to migrate the game jam to an online-only environment quickly. Further, post-pandemic, according to a recent study conducted by Verizon, gaming usage increased by 115% in the United States compared to the pre-pandemic period. The online gaming platforms and live streaming services also witnessed a record number of users throughout March and April. An increase in gaming traffic was witnessed during peak hours by 75% over the post-pandemic period.

Neuro-gaming Technology Market Trends

Education Segment is Expected to Hold Significant Market Share

- Mind reading or brain-computer interface technologies help improve learning and concentration skills. Additionally, studies have shown how neurogaming technologies can help people with Alzheimer's, ADHD, and other related conditions. Companies such as Neuroelectrics have developed an EEG headset designed to stimulate the brain while playing games to treat problems such as chronic pain and depression. The company claims that its product can also be used for stroke rehabilitation.
- Further, In July 2022, Georgia State University researchers used functional magnetic resonance imaging (fMRI) to discover that gaming could be a useful tool for training in perceptual decision-making. Frequent players of video games showed superior sensorimotor decision-making skills and enhanced activity in key regions of the brain when compared to non-players. The research project involved 47 college-age participants, with 28 categorized as regular video game players and 19 as non-players.
- Similarly, researchers and scientists from Aalto University in Finland are developing a computer game to treat depression. The game requires players to solve challenges in a fantasy city designed to afford a therapeutic benefit, which eases symptoms of depression and improves cognitive performance. The game is currently unsuitable for the elderly, people with severe psychotic depression, or the only treatment form.
- Game-based learning (GBL) "fits" with the nervous system's sensing-thinking-doing functionality as long as it is incorporated into the flow of educational stimuli. Additionally, GBL satisfies the normal "needs" of the brain. The brain's primary need is to stay alive and maintain control. The brain's second requirement is to feel good, which includes having fun, playing, and receiving rewards. The brain's third need is to conserve energy by making things logical and consistent. Learning through games gives the brain a sense of control, delivers enjoyment, play, and rewards, and satisfies the desire to conserve energy by having a logical plot.
- With the increasing number of students and universities across the globe, the necessity of neuro-gaming technology is growing, according to the Times Higher Education, Tribhuvan University in Nepal has the maximum number of registered students in terms of full-time equivalents globally as of the academic year 2022/23, with 460,000 students. Payame Noor University in Iran and Al-Azhar University in Egypt, which came in second and third, had over 425,000 enrolled students. Egypt is home to many universities with the most students in the world.

North America is Expected to Register the Largest Market

- Owing to the early adoption of technologies and the presence of many innovative developers operating in the market, Neuro-Gaming Technology has increased in the region. The increased adoption of video streaming apps on mobile devices and television to watch movies, TV shows, and live events on-demand has aided the Gaming industry in North America.
- Increasing awareness among users and the rise in the adoption of advanced gaming technologies are expected to create new growth opportunities for the players in the neuro-gaming technology market in the region during the forecast period. Psychologists and game developers have been working primarily to create games that can help boost the brain's function and

provide therapeutic benefits to all those suffering from depression and other mental health disorders. For instance, Akili Interactive has built a standard iPad game that can measure the differences in brain activity between a normal child and one with ADHD or autism. The game measures 65 different pieces of data every second through the gameplay and collects clear signatures that come out of the game, which can tell exactly the cognitive deficits of the user.

- Further, the market is expected to be spurred by the ability of the technology to integrate real-time brain monitoring to engage and entertain users while maximizing learning efficiency, particularly in children with disorders. The number of children suffering from disorders in the U.S. is rising. Neuro-gaming technology can solve these issues and limit any further transition to more significant problems later in life. For instance, according to The U.S. Center for Disease Control and Prevention (CDC) estimates, one in every seven children (aged two to eight) suffers from a mental, behavioral, or developmental disorder. They also estimated that one in every five children (aged 13 to 18) could experience a severe mental disorder at some point in their lives.

- Canada's gaming enterprises, technologies, and products are witnessing an increasing demand. Multiple key factors, such as technological innovations, consumer preferences for new products, shifts in public perception, and innovations, have driven the expansion of the Canadian gaming industry. This has also attracted interest from international companies wanting to make a strong foothold in Canada. Further, the growth of virtual reality, augmented reality, and haptic sensation systems that aid neuro-gaming technology ensure the market's growth in the region. For instance, in recent years, Red Six Aerospace, Inc. developed an AR platform to train U.S. military aviators in air-to-air combat. Such developments are expected to aid the market's growth in the region.

Neuro-gaming Technology Industry Overview

The global neuro-gaming technology market is moderately competitive due to the presence of multiple players. The players in the market are adopting strategies like product innovation, mergers, and acquisitions to expand their product portfolio, expand their geographic reach, and primarily stay competitive in the market. Some of the vendors in the market are Emotiv Inc., iMotions A/S, Qneuro Inc., and Ultraleap Ltd., NeuroSky Inc. among others.

- November 2022 - EMOTIV, a bioinformatics company that uses electroencephalography (EEG) to advance understanding of the human brain, and X-trodes, a company that brings wireless medical-grade monitoring solutions to the home environment, announced a collaboration on a new first-of-its-kind solution for simultaneous brain and physiological measurement that can be used outside of the lab setting.

- The market estimate (ME) sheet in Excel format
- 3 months of analyst support

Table of Contents:

1 INTRODUCTION

1.1 Study Assumptions and Market Definition

1.2 Scope of the Study

2 RESEARCH METHODOLOGY

3 EXECUTIVE SUMMARY

Scotts International. EU Vat number: PL 6772247784

tel. 0048 603 394 346 e-mail: support@scotts-international.com

www.scotts-international.com

4 MARKET INSIGHTS

4.1 Market Overview

4.2 Industry Stakeholder Analysis

4.3 Industry Attractiveness - Porter's Five Forces Analysis

4.3.1 Bargaining Power of Suppliers

4.3.2 Bargaining Power of Consumers

4.3.3 Threat of New Entrants

4.3.4 Threat of Substitutes

4.3.5 Intensity of Competitive Rivalry

4.4 Assessment of COVID-19 Impact on the Market

4.5 Games/Apps Landscape for Children with Neuro disabilities

4.5.1 Analysis on Impact of Games on Children with Neuro Disorders such as ADHD, ASD etc.

4.5.2 Training Programs and Games Reviewed and Suggested for Kids by Research Organizations and Healthcare Institutions

4.5.3 List of Game Developers such as Monte Cristo, that have developed games like Dino Island specifically designed to improve attention, working memory, and executive function in children with neurodevelopmental disabilities (Business Overview, Game Type, Popularity, etc.)

4.5.4 Overview of Educational Game Developers etc.

4.5.5 Role of the Latest Technologies in Developing the Ecosystem (Including, BCI, AR, VR, etc.)

5 MARKET DYNAMICS

5.1 Market Drivers

5.1.1 Rising Development of Brain Computer Interfaces (BCIs)

5.1.2 Increasing Adoption of Smart Devices

5.2 Market Restraints

5.2.1 Lack of Awareness and Limited Actions Included in Games

6 MARKET SEGMENTATION

6.1 By Component

6.1.1 Hardware

6.1.2 Software

6.2 By End User

6.2.1 Healthcare

6.2.2 Education

6.2.3 Entertainment

6.2.4 Other End Users

6.3 By Geography

6.3.1 North America

6.3.2 Europe

6.3.3 Asia Pacific

6.3.4 Rest of the World

7 COMPETITIVE LANDSCAPE

7.1 Company Profiles

7.1.1 Emotiv Inc.

7.1.2 iMotions A/S

7.1.3 Qneuro Inc.

7.1.4 Ultraleap Ltd.

Scotts International. EU Vat number: PL 6772247784
