

## **Pico Projector - Market Share Analysis, Industry Trends & Statistics, Growth Forecasts (2025 - 2030)**

Market Report | 2025-04-28 | 100 pages | Mordor Intelligence

### **AVAILABLE LICENSES:**

- Single User License \$4750.00
- Team License (1-7 Users) \$5250.00
- Site License \$6500.00
- Corporate License \$8750.00

### **Report description:**

The Pico Projector Market size is estimated at USD 3.77 billion in 2025, and is expected to reach USD 6.33 billion by 2030, at a CAGR of 10.9% during the forecast period (2025-2030).

The pico projector systems are based on advancing laser technology and are predicted to revolutionize the worldwide projector market. Small handheld gadgets and peripherals, such as tablets, cameras, personal digital assistants, computers, and cellphones, can also be equipped with these projectors.

### **Key Highlights**

- Furthermore, LEDs are used in the pico projectors, which helps them endure longer without requiring any new parts or external power sources. The Pico projectors are constructed explicitly with USB inputs or SD memory card readers, allowing customers to connect to the projectors using USB sticks or memory cards.
- For instance, in June 2023, Zebronics launched its latest ZEB-PixaPlay 22 1080p Smart LED Projector in the Indian market. It has dual-band WiFi and Bluetooth connectivity-a quad-core processor and 1GB RAM power. The portable projector has several features, including a 1080p resolution, a 3200 lumens brightness, a 30000-hour LED lamp life, electronic focus, and mirroring support.
- In addition, pico projectors are used in a variety of sectors. Combined with devices like HUDs, a Pico projector can aid the armed services with a 3D projection of enemy deployments, bunker positions, and plot charts of the sea or land-based foes in the military and aerospace industries. For instance, in February 2023, Domestic consumer electronics brand Portronics launched its new compact brilliant music LED projector, Pico 10. It features a powerful 280 Lumens LED lamp powered by Android 9.0. The Pico10 can project images and videos up to 150 inches on any surface.
- Various players in the market are developing innovative products to stay competitive in the studied market. Further, in August

2022, Vimgo launched a Vimgo P10 Ultra-Budget Pico Projector. It offers several benefits, such as a giant lens camera, which gives various image-quality benefits. Also, it provides good brightness and contrast, seemingly at the cost of uniformity and overall sharpness.

- Moreover, the rapid developments in laser light source development, particularly in the gallium-nitride material systems, pave the way for a wide range of wavelengths now available in pico-projection applications, intended to deliver 20 lumens or less. This advancement has provided various designers of pico-projection systems with great flexibility in choosing different laser wavelengths to optimize specific performance metrics.
- The sale of electronics was impacted significantly by the COVID-19 outbreak, as China was one of the major suppliers of finished products and raw materials. The industry faced a reduction in production, disruption in the supply chain, and price fluctuations.
- Moreover, the market is expected to grow in the forecasted period as the consumer electronic industries nowadays are increasing rapidly. According to the Department for Promotion of Industry and Internal Trade, in May 2022, USD 1.34 billion worth of electronic goods were exported from India. In addition, China's electrical and electronic equipment exports were USD 954.78 billion in 2022, as per the United Nations COMTRADE database on international trade.

## Pico Projectors Market Trends

### DLP Projectors Driving the Significant Market Growth

- DLP is one of the prominent technologies in projection and near-eye display and is well-implemented in Pico projectors. The conventional projectors are based on DLP technology. Hence, this technology offers better results in the pico projector as well.
- Demand for DLP projectors is anticipated to rise as digital screens become more widely used in the film industry. DLP projectors are becoming increasingly popular as digital screens replace analog screens. The number of movies released internationally has increased recently, further boosting the DLP projector demand. In the upcoming years, DLP cinema is anticipated to expand even more. Additionally, DLP projectors with an ultra-short throw are used for small-space projections. According to FCCI, several cinema screens in India further recorded 9,382 in 2022.
- Further, due to the need for two synchronized projectors, conventional 3D projection technology is more expensive. Additionally, the markets for spectroscopes, holographic storage, and medical imaging offer opportunities for DLP projectors. The rainbow effect can occur when a user quickly looks away from the projected image or switches their gaze from one side of the screen to another.
- Many manufacturers, though, are eager to supply DLP projectors specifically to meet the demand in the entertainment industry. For instance, Optoma USA will release its most recent 4K DLP projector in May 2022 to increase home entertainment versatility. For screens or walls larger than 300 inches, the UHD55 promises low lag gaming, daylight cinematic viewing, and comparatively easy setup. With a maximum throw resolution of 3,480 x 2,160 pixels, the UHD55 gaming and home entertainment projector can handle displays with diagonal sizes ranging from 34.1 to 302.4 inches. The new Optoma UHD55 combines top-of-the-line features to satisfy the needs of home entertainment enthusiasts while delivering image quality, performance, and functionality.
- Similarly, the Government of India is shifting from a traditional education system to smart classrooms. In January 2023, the Uttarakhand government launched an innovative classroom project set in government schools. The government aims to reach over 11,000 schools in the state. Also, in January 2023, Huawei Technologies Co. Ltd, a China-based DLP projector provider, launched a smart classroom 2.0 solution at the education forum. The solution is integrated with intelligent edge devices, and Wi-Fi 7 provides innovative teaching practices through cloud-edge interaction.

### North America to Experience Significant Market Growth

**Scotts International. EU Vat number: PL 6772247784**

[www.scotts-international.com](http://www.scotts-international.com)

- North America is one of the early adopters of technology and innovations. The region has been experiencing high growth in its expenditure on consumer electronics. Due to its small design and advanced interface connectivity with Wi-Fi and HDMI, the sales of pico projectors are increasing widely in the United States and Canada.
- Moreover, the anticipated release of new applications of this technology, particularly in the field of life sciences, intelligent traffic systems, and vision-guided robotics, is expected to boost the demand for pico projectors in the region. Vast IT infrastructure in the area has grown the market and enhanced these projectors' vital characteristics, like mobility and portability.
- For instance, in April 2023, Cognex Corporation, an American manufacturer of machine vision systems, launched the In-Sight 3800 Vision System. Developed for high-speed display lines, In-Sight 3800 offers an extensive vision toolset, powerful imaging capabilities, and flexible software to deliver a fully integrated solution for a wide range of inspection applications. This new system is implanted with a comprehensive set of vision tools, including Artificial Intelligence based edge learning technology and standard rule-based algorithms.
- Further, in February 2023, Digital Projection International received the coveted TNT (Top New Technologies) award from CE Pro magazine for its HIGHlite 4K UHD Reference Satellite Modular Light Source (MLS) projection system. Such developments in the region may further propel the studied market growth.
- Furthermore, companies are extensively investing in developing automotive HUDs using Pico projectors. US-based Maxin Integrated recently released its design for a MEMS-based automotive laser pico projector. It is designed with a triple laser-diode pico projector system on chip (SoC) and built around a pico laser drive. This enables infinite focus, readability in sunlight, and excellent color.
- The primary factors driving the scale and growth of the pico projectors in North America are the increasing investments in the consumer electronics market and the strong demand from the automotive, healthcare, education, and research markets.

## Pico Projectors Industry Overview

The pico projector market appears moderately concentrated, with significant players adopting strategies like product innovation and mergers and acquisitions. Some of the significant participants in the market are Sony Corporation, Koninklijke Philips NV, and LG Electronics Inc. Some of the recent developments in the market are:

- November 2023 - Portronics Unveils PICO 12 Smart Portable Projector for Ultimate Home Entertainment. Portronics, the industry leader in digital and portable consumer electronics in India, has announced the launch of the Pico 12 smart portable projector with up to 4K projection.
- August 2023 - Portronics has launched a new portable Android-powered projector called "Beem 410". The projector can last up to 30,000 hours has 250 ANSI Lumens brightness and comes with an infrared remote that can come in handy if you want it to control from a distance.

## 2 RESEARCH METHODOLOGY

## 3 EXECUTIVE SUMMARY

## 4 MARKET INSIGHTS

### 4.1 Market Overview

### 4.2 Industry Attractiveness - Porter's Five Forces Analysis

#### 4.2.1 Bargaining Power of Buyers

#### 4.2.2 Bargaining Power of Suppliers

#### 4.2.3 Threat of New Entrants

#### 4.2.4 Threat of Substitutes

#### 4.2.5 Intensity of Competitive Rivalry

### 4.3 Assessment of Impact of COVID-19 on the Industry

## 5 MARKET DYNAMICS

### 5.1 Market Drivers

#### 5.1.1 Increasing Application in Consumer Electronics

#### 5.1.2 Development of Pico Projectors with Superior Specification

### 5.2 Market Challenges

#### 5.2.1 Safety Issues with Laser Beams Projector and Low Brightness

## 6 TECHNOLOGY SNAPSHOT

### 6.1 By Technology

#### 6.1.1 Digital Light Processing

#### 6.1.2 Liquid Crystal on Silicon

#### 6.1.3 Laser Beam Steering

#### 6.1.4 Holographic Laser Projection

### 6.2 By Product Type

#### 6.2.1 USB Pico Projector

#### 6.2.2 Embedded Pico Projector

#### 6.2.3 Media Player Pico Projector

#### 6.2.4 Stand-alone Pico Projector

## 7 MARKET SEGMENTATION

### 7.1 Geography

#### 7.1.1 North America

#### 7.1.2 Europe

#### 7.1.3 Asia-Pacific

#### 7.1.4 Rest of the World

## 8 COMPETITIVE LANDSCAPE

### 8.1 Company Profiles

#### 8.1.1 Aaxa Technologies Inc.

#### 8.1.2 Acer Inc.

#### 8.1.3 Coretronic Corporation

#### 8.1.4 Sony Corporation

#### 8.1.5 Cannon Inc.
