Report description:

The France carbon black market is projected to grow at a CAGR of 5.90% between 2025 and 2034.

France Carbon Black Market Growth

The France carbon black market growth is led by its uses in the manufacturing of tyres as a strengthening material and in plastic production.

Carbon black is widely used in the tyre industry for making tyres and non-tyre rubbers. It functions as a reinforcing filler and improves the properties of rubber compounds, such as its tensile strength and resistance. Moreover, it increases performance and enhances tyres durability on different road surfaces.

Growth for the carbon black industry in the domestic region will likely come from rising use cases in rubber and plastic products among other materials such as textiles and apparel, as the market witnesses a rise in manufacturing capabilities. As of April 2024, Monolith, a global leader in low-emission carbon black expanded its partnership with Mines Paris, a French company to increase research and development efforts into making low-emission carbon black products.

In plastics, carbon black is a common ingredient, where it serves both as a pigment and a reinforcing agent. It is also used in coloration, UV protection, conductivity, and reinforcement. Carbon black pigments that are used in consumer goods like automotive components or packaging materials come out black in color. It also improves mechanical properties such as strength or toughness.
