Report description:

The Mexico fertiliser market reached approximately 3.04 Million Tons in 2024. The market is projected to grow at a CAGR of 3.00% between 2025 and 2034, reaching a volume of around 4.09 Million Tons by 2034.

Mexico Fertiliser Market Growth

The expansion of the agricultural sector, rising soil health awareness among farmers, and the development of innovative fertiliser formulations are the most influential market drivers. Innovative formulations such as slow-release fertilisers are designed to match the specific nutrient requirements of different crops at various stages of their growth cycle. By releasing nutrients slowly, these fertilisers can minimise wastage and prevent nutrient runoff, which can contaminate water bodies and harm aquatic ecosystems.

Additionally, precision agriculture techniques, such as the usage of drones, global positioning systems, and soil sensors, are readily adopted in Mexico to optimise the distribution of fertilisers and minimise their excess usage.

The Mexican government announced the acquisition and restoration of five fertiliser plants, facilitated by the federal oil and gas company Pemex in 2024. This is a crucial part of their strategy to attain food self-sufficiency by September, which marks the end of the current government's regime.
