Report description:

The Philippines ICT market reached approximately USD 16.68 Billion in 2024. The market is projected to grow at a CAGR of 8.00% between 2025 and 2034 to reach a value of around USD 36.01 Billion by 2034.

Philippines ICT Market Growth

The increasing internet provisions in the country is a key driver of this market. The availability of the internet is fundamental for being able to harness the potential of ICT. Things such as e-commerce, e-governance, social media, content consumption and gaming are only possible through the availability of Internet access. As per industry reports in 2022, people in this country between the ages of 16 and 64 used the internet for an average of 10 hours and 27 minutes every day. The Philippines has the largest population of social media users in the world, and its people spend a lot of time online.

The growing number of digital devices in the country is another contributor to the market. According to the Philippines Statistics Authority, the digital economy in 2023 amounted to USD 35 billion and contributed 8.4% to the country's Gross Domestic Product. The increase in the number of digital devices has significantly propelled the market because the extensive availability of devices enables people to efficiently make use of the existing and upcoming ICT technologies.

Government investment in broadband infrastructure and support is a major driving factor for the ICT market in the Philippines. According to the global eGovernment rating, the Philippines is ranked 95th. Under the "Free Public Internet Access Program," people can use free Wi-Fi. An additional program aimed at achieving the UN Millennium Development Goal of universal access to ICT is "DOST-ICTO." By creating community centres known as "CeCs," the DOST-ICTO aims to employ ICT to promote growth and development in the Philippines. These centres cater to the diverse ICT requirements of individuals, providing each community with alternate modes of instruction and skill development.
