Report description:

The market size for Peru construction materials reached a value of more than USD 166.64 Million in 2024. The Peru construction materials market size is expected to grow at a CAGR of 4.30% between 2025 and 2034, reaching a value of USD 253.88 Million by 2034.

Key Trends in the Market

Construction materials are the substances such as wood, metals, cement, bricks, clay, concrete which are used in the assembly of structures or buildings. A variety of materials such as waterproofing materials, construction chemicals, and durability aids, among others are termed as modern construction materials. They are important in the creation of structurally-sound buildings and other components that are durable, robust, and safe for use.

- Construction in the industrial sector is expected to increase rapidly in Peru which will increase the demand for construction materials. Construction is subjected to rise owing to an increase in mining, manufacturing, and export activities which is driven by a strong pipeline of mining projects.
- Increasing investments in the infrastructure for the energy and utility sector, including water, electricity, and telecommunication all over the country is subjected to help the market to grow.
- Initiatives by the government to re-build houses, roads, and other structures in the flood-affected regions in Peru is expected to support in the Peru construction materials market growth.

Market Segmentation

The EMR's report titled "Peru Construction Materials Market Report and Forecast 2025-2034" offers a detailed analysis of the market based on the following segments:

- Commercial
- Industrial
- Medical and Healthcare
- Others

Market Share by Type

The share of waterproofing in the Peru construction materials market is on the rise, as more companies and the government are investing in protecting buildings and structures from water damage. Owing to the humid temperature in Peru throughout the year and annual rain volume, demand for waterproofing has been growing.

Concrete admixture has also observed a rapid growth in the Peru construction materials market because of increasing construction activities and improvement in the older buildings, supplementing existing structures with concrete and concrete admixtures. Concrete admixtures are chemicals obtained either naturally and by manufacturing that are added in the process of concrete mixing to improve the properties of hardened or fresh concrete.

Self-construction in Peru is a major factor affecting the growth of the demand for concrete admixture. Many people in the country still practise ancestral construction methods using 'noble materials' which includes concrete, among other materials.

Market Share by End Use

The residential sector accounts for a sizable share in the Peru construction materials market based on end use because of the increase in social housing programmes supported by the Peruvian government. Public private partnership housing along with bioclimatic homes projects are subjected to further enhance the growth of the market.

The commercial end use segment of the construction materials market in Peru is also expected to grow in the forecast period. This is due to investments aimed at bolstering tourism sector in the country, by improving the infrastructure to cater to international and domestic tourists. The medical and healthcare infrastructure is also improving, fuelled by investments from the government aimed towards improving healthcare capabilities within Peru.

Competitive Landscape

The comprehensive EMR report provides an in-depth assessment of the market based on the Porter's five forces model along with giving a SWOT analysis. The report gives a detailed analysis of the following key players in the Peru construction materials market covering their competitive landscape and latest developments like mergers, acquisitions, investments, and expansion plans.
