**Report description:**

**Market Overview**

Global Tertiary Amine Market was valued at USD 4.27 Billion in 2024 and is expected to reach USD 5.38 Billion by 2030 with a CAGR of 4.13% during the forecast period. Tertiary amines find direct application as intermediates in the manufacturing processes of a wide range of chemicals, including fuel oils, cosmetics, citric acid, and surfactants. They also play a crucial role in the production of metal-extracting agents, preservatives, and fungicides. These compounds are primarily employed for the synthesis of quaternary ammonium salts, as well as in replacement reactions and the removal of amino groups.

**Key Market Drivers**

**Rising Demand of Tertiary Amine in Personal Care Sector**

The personal care industry has experienced a remarkable transformation in recent years, driven by changing consumer preferences, increasing awareness of self-care, and a growing focus on sustainability. Within this dynamic landscape, tertiary amines, a class of organic compounds, have emerged as crucial ingredients in a wide range of personal care products. From skincare to haircare, fragrances, and more, tertiary amines play a vital role in enhancing the efficacy, safety, and sensory appeal of these products. Tertiary amines, characterized by their three alkyl or aryl groups attached to a central nitrogen atom, possess unique chemical properties that make them invaluable in personal care formulations. These compounds serve a variety of functions, including acting as emulsifiers, surfactants, pH adjusters, and conditioning agents. Tertiary amines are integral to the formulation of skincare products such as cleansers, moisturizers, and anti-aging creams. They function as emulsifiers, helping to

**Scotts International. EU Vat number: PL 6772247784**

tel. 0048 603 394 346 e-mail: support@scotts-international.com

www.scotts-international.com

blend oil and water-based ingredients, ensuring stable formulations that provide optimal hydration and texture. Additionally, their emollient properties contribute to smoother, softer skin, and they can serve as gentle exfoliants in chemical peels and skin treatments. In the haircare sector, tertiary amines are widely used in shampoos, conditioners, and hair styling products. They act as conditioning agents, detanglers, and antistatic agents, helping to manage frizz, improve hair texture, and enhance the overall appearance of the hair. Tertiary amines also assist in pH adjustment, ensuring that hair care products are mild and non-irritating to the scalp.

According to data from the World Population Review, the United States leads globally in average gross disposable income per capita, reaching USD 62,722 as of 2023. This significantly outpaces other high-income countries such as Luxembourg (USD 47,336), Switzerland (USD 47,124), Germany (USD 42,417), and Australia (USD 41,194). This high level of disposable income in the U.S. indicates a strong consumer purchasing power, particularly in discretionary categories such as personal care and cosmetics. As consumers in wealthier markets are more willing and able to spend on premium and specialized products, this drives increased demand for advanced formulations including those leveraging tertiary amines for their functional benefits (e.g., emulsification, conditioning, and pH adjustment). In turn, the robust spending environment in developed economies supports sustained growth in the global tertiary amines market, especially within the personal care segment. Brands targeting these high-income markets are more likely to invest in R&D for innovative tertiary amine-based products, further reinforcing market expansion.

#### Key Market Challenges

##### Regulatory Compliance and Environmental Concerns

One of the primary challenges confronting the tertiary amines market is navigating the complex landscape of regulatory compliance. Tertiary amines, depending on their chemical structure and intended use, can pose environmental and health risks. As a result, regulatory bodies across the globe have imposed stringent regulations on the production, handling, and disposal of these compounds. For example, in the pharmaceutical industry, where tertiary amines are used as intermediates in drug synthesis, compliance with Good Manufacturing Practices (GMP) and stringent quality control is mandatory. Any non-compliance can lead to regulatory sanctions, product recalls, and damage to a company's reputation.

Moreover, the agricultural sector, which relies on tertiary amines in the formulation of pesticides and herbicides, must adhere to strict regulations to ensure product safety and environmental protection. Evolving regulations related to pesticide residues in food products and their impact on ecosystems further complicate compliance efforts. Addressing the challenge of regulatory compliance necessitates continuous monitoring of changing regulations, robust documentation of processes, and investments in research and development to develop environmentally friendly alternatives.

#### Key Market Trends

##### Rising Demand in Pharmaceuticals

One of the most significant trends in the tertiary amines market is their increasing utilization in the pharmaceutical industry. Tertiary amines play a vital role as key intermediates in the synthesis of various pharmaceutical compounds. Their versatility in organic chemistry enables the creation of complex molecules, essential for the development of novel drugs. Pharmaceutical companies are leveraging tertiary amines to streamline the synthesis of active pharmaceutical ingredients (APIs), enhancing drug discovery and production processes. According to the World Health Organization (WHO), chronic diseases remained the leading cause of death and disability globally in 2024, with non-communicable diseases (NCDs) accounting for over 43 million deaths in 2021, approximately 75% of all non-pandemic-related fatalities. At the same time, the global population is projected to grow from 8.2 billion in 2024 to a peak of 10.3 billion by the mid-2080s, as per the World Population Prospects 2024. This demographic expansion, coupled with the persistent rise in NCDs, is driving strong demand for pharmaceuticals and active pharmaceutical ingredients (APIs). Tertiary amines, widely used as intermediates in the synthesis of cardiovascular, oncology, and metabolic drugs, are becoming increasingly vital in meeting the global need for chronic disease treatments. As healthcare systems scale to address long-term illness and aging populations, this trend is expected to fuel sustained growth in the tertiary amine market. Moreover, tertiary amines are found in several widely-used medications. For example, the well-known antihistamine drug, diphenhydramine, contains a tertiary amine moiety. As the demand for pharmaceuticals continues to rise worldwide, the tertiary amines market is expected to experience sustained growth.

#### Key Market Players

**Scotts International. EU Vat number: PL 6772247784**

- Albemarle Corporation
- Eastman Chemical Company
- Kao Corporation
- BASF SE
- Solvay S.A.
- Dow Inc.
- Balaji Amines Ltd.
- Alkyl Amines Chemicals Ltd.
- Indo Amines Ltd.
- Arkema S.A.

Report Scope:

In this report, the Global Tertiary Amine Market has been segmented into the following categories, in addition to the industry trends which have also been detailed below:

-□Tertiary Amine Market, By Product:

- o C-8
- o C-10
- o C-12
- o C-14
- o C-16

-□Tertiary Amine Market, By End Use:

- o Personal Care
- o Cleaning Products
- o Agricultural Chemicals
- o Others

-□ Tertiary Amine Market, By Application:

- o Surfactants
- o Biocides
- o Flotation Reagents
- o Others

-□Tertiary Amine Market, By Region:

- o North America
  - United States
  - Canada
  - Mexico
- o Europe
  - France
  - United Kingdom
  - Italy
  - Germany
  - Spain
- o Asia Pacific
  - China
  - India
  - Japan
  - Australia
  - South Korea
- o South America

- Brazil
- Argentina
- Colombia
- o Middle East & Africa
- South Africa
- Saudi Arabia
- UAE

#### Competitive Landscape

Company Profiles: Detailed analysis of the major companies present in the Global Tertiary Amine Market.

#### Available Customizations:

Global Tertiary Amine Market report with the given market data, TechSci Research offers customizations according to a company's specific needs. The following customization options are available for the report:

#### Company Information

-□ Detailed analysis and profiling of additional market players (up to five).

### **Table of Contents:**

1. Product Overview
  - 1.1. Market Definition
  - 1.2. Scope of the Market
    - 1.2.1. Markets Covered
    - 1.2.2. Years Considered for Study
    - 1.2.3. Key Market Segmentations
2. Research Methodology
  - 2.1. Objective of the Study
  - 2.2. Baseline Methodology
  - 2.3. Key Industry Partners
  - 2.4. Major Association and Secondary Sources
  - 2.5. Forecasting Methodology
  - 2.6. Data Triangulation & Validation
  - 2.7. Assumptions and Limitations
3. Executive Summary
  - 3.1. Overview of the Market
  - 3.2. Overview of Key Market Segmentations
  - 3.3. Overview of Key Market Players
  - 3.4. Overview of Key Regions/Countries
  - 3.5. Overview of Market Drivers, Challenges, Trends
4. Impact of COVID-19 on Global Tertiary Amine Market
5. Voice of Customer
6. Global Tertiary Amine Market Outlook
  - 6.1. Market Size & Forecast
    - 6.1.1. By Value
  - 6.2. Market Share & Forecast
    - 6.2.1. By Product (C-8, C-10, C-12, C-14, C-16)
    - 6.2.2. By Application (Surfactants, Biocides, Flotation Reagents, Others)
    - 6.2.3. By End Use (Personal Care, Cleaning Products, Agricultural Chemicals, Others)
    - 6.2.4. By Region
    - 6.2.5. By Company (2024)
