### **Report description:**

The global agricultural harvester market stood at a value of around USD 31.96 Billion in 2024 and is projected to reach a value of USD 51.08 Billion by 2034, exhibiting a CAGR of 4.80% during the forecast period of 2025-2034.

These harvesters are used to boost farm output in less time and their use has proved to be better than standard techniques of harvesting, which is driving the demand for the product. Furthermore, agricultural practices are becoming increasingly dependent on machines and instruments, such as harvesters, as they minimise farm drudgery, increase productivity, reduce the cost of crop manufacturing, and considerably reduce harvest losses, thus, aiding the consumers.

The combination of harvesters helps to minimise labour cost and time by combining three distinct activities, that is, harvesting, threshing, and winnowing into one method. Technological advances in forage harvesters will further enhance the popularity of the product among consumers, thus, aiding the agricultural harvester market growth.
