Report description:

The global anti-slip coatings market stood at a value of around USD 135.94 Million in 2024 and is expected to reach USD 248.08 Million by 2034 at a CAGR of 6.20% during the forecast period of 2025-2034.

Excellent properties of anti-slip coatings like high resistance to scratches, among others, are driving the demand for the product in various sectors. Due to the fast development in the industrial sector, the global anti-slip coatings industry is witnessing increased demand.

Market Segmentation

Anti-slip coatings assist in preventing accidents in elevated slippery regions such as the kitchen floor or the bathroom, where liquid spills are highly likely to occur. Proper use of anti-slip coatings on the floor not only keeps the accidental slipping at bay but also keeps the lustre and shine of the existing surface for longer periods. It contains additives like oxide of aluminium, sand, or carborundum. The global anti-slip coatings market is divided based on type, epoxy resins, and application

Global Anti-Slip Coatings Market Trends

The anti-slip coatings market is experiencing significant growth, driven by increasing safety concerns across various industries such as construction, automotive, and marine. These coatings enhance surface traction, reducing slip-and-fall accidents, which is a key driver in their rising demand. Trends in the market include the development of eco-friendly and durable anti-slip coatings designed for a wide range of surfaces, from industrial floors to residential settings. Additionally, water-based formulations and rapid-drying coatings are gaining popularity due to their reduced environmental impact and ease of application. Emerging regions, especially in Asia-Pacific, are witnessing heightened adoption of anti-slip solutions as urbanization increases. The market is poised for continued growth as regulatory standards for workplace safety become stricter, pushing demand for slip-resistant coatings globally.

Market Analysis

The global anti-slip coatings market is being driven by the increasing use of anti-slip coatings in chemical processes and energy and petrochemical sectors to fix slip problems in moist environments. Further, advancement in technology and the growing urbanisation is aiding the industry growth. However, the implementation of anti-slip coatings is time-consuming and weather-dependent, which may hinder its growth during the forecast period.
