### **Report description:**

Australia architectural coatings market demand is getting bolstered by the nature of these coatings for protecting and enhancing the appearance of buildings and structures. Their benefits include providing protection, improving aesthetics, ensuring durability, reducing environmental impact, offering specialized functionalities, and delivering economic savings. The architectural coatings are classified into non-residential and residential, based on end-use. There has been a steady increase in residential construction activities, including new housing projects and renovations. This rise in construction leads to a higher demand for architectural coatings used for both the interiors and exteriors of homes. The expansion of commercial spaces, including office buildings, retail stores, hotels, and restaurants, leads to increased demand for architectural coatings. These projects often require high-performance coatings for both aesthetic appeal and durability. According to the ABS, in February 2024, 12,520 dwelling units were approved in Australia. The Australia architectural coatings market developments are being guided by growing demand for coatings that offer multiple functions beyond aesthetics, such as anti-bacterial, anti-graffiti, fire resistance, and corrosion protection. These coatings are particularly important in commercial, industrial, and public buildings. Moreover, manufacturers are increasingly using sustainable and bio-based raw materials in their products. This trend aligns with the broader global movement towards sustainability and reduces the environmental footprint of architectural coatings.
