Report description:

Based on technology, the Australia paints and coatings market share is led by powder coating as they are more sustainable as compared to solvent-borne coating. They are solvent-free in nature thus producing no amount of volatile organic compounds in the environment and helps in preventing air pollution, aiding the Australia paints and coatings market. Moreover, they offer durability for longer periods as they are not affected by moisture, harsh temperature, corrosion and fading. They are also cost-effective as compared to solvent-borne coatings due to the low cost of maintenance and higher durability. The health hazards caused by powder coatings are less due to the absence of exposure of workers to harmful solvents. The Australia paints and coatings market growth is being driven by various trends including the increase in the usage of environment-friendly solvents including water and to promote sustainability, thus, the use of low volatile organic compounds is increasing. Moreover, the use of smart coatings is also increasing which possesses properties including self-healing and antimicrobial thus increasing the durability of the coatings. The integration of nanoparticles in the nano-coatings enables the surfaces to become resistant against scratches and moisture. In 2023, the new aircraft coating facility was introduced by the Australia government and BAE Systems.
