Report description:

Based on technology, the Australia wireless charging market share is led by radio frequency-based charging due to the high range of radio frequency which enables users to charge their devices without physical contact with the charger. They offer high efficiency over inductive charging as they can be penetrated deep into the obstacles without much energy loss. Moreover, they can charge various types of devices made up of different power requirements and materials. They provide safety against high electromagnetic fields as they operate at lower power levels. Various trends driving the Australia wireless charging market growth are being guided by the increase in the incorporation of wireless charging options in devices including smartphones, headphones and others. They have witnessed advancements including higher efficiency and connectivity with different devices. Moreover, they are made environment-friendly with higher efficiency to promote sustainability and have improved battery function due to the integration of wireless charging with the Internet of Things. To promote the wireless charging of electric vehicles while moving on the road, the Swinburne University of Technology has led a \$3 million project funded by the Australia government.
